Overview

Jsm Config is a software for configuring various softwares in the Jsm devices such as the WSX1 and CSX5 units. It works as a universal template-based programming tool and offers a user experience tailored to each programming software template designed to make programming as simple as possible. Jsm Config includes built-in exhaustive help for all parameters for all templates and may contain a complete documentation manual (for some templates). Jsm Config can open/save configuration files and upload/download to the connected Jsm device. Jsm Config also includes a tool to administer the WSX1 unit.

Features

- supports many configuration templates
- extensively customizable according to templates
- can download/upload to WSX1 and CSX5 units
- auto-reset WSX1 units before and after transfers
- configuration templates are separated in multiple pages for a better organization
- quick help for each configuration parameter describing it and giving it's default value
- documentation manual for the whole template which auto-jumps to pertinent locations automatically
- navigation outline at the top and bottom of the screen for easier navigation
- default values for parameters resettable with the middle mouse button
- different colors for fields whose values have changed from the default one
- saves memory space by omitting fields that have their default value when uploading the config. file
- admin. tool for WSX1 : upload program/bios, set date/time, view serial number, list troubles (CTD3), …

Use with the following products

- WSX1 :   CPU with software (or CSX5)
- Templates :   To configure unit software

Technical specifications

- Systems :   Windows XP, Vista, 7, 8
- Platform :   Microsoft .NET Framework 2.0
- Connection :   serial (RS232) connexion to device
