↓				
Default Background Color :				
Alets Sounds: Edemal Speaker (wave) Internal Speaker (console beep) Scrolling alets speed: Jam Display remembers the window positions for each display. Click the button to clear out memorized window positions.				
Language : English OK Cancel				

Features

- display calls from multiple source addresses (multiple panels on the same physical screen)
- display calls in a rotating manner (for very long or multiple consecutive messages)
- · select the size (width) of the panel
- select scrolling speed for scrolling messages
- select message windows transparency (opacity)
- messages will not take control of keyboard and mouse and won't interrupt workflow
- change the background color of alert boxes if certain important sequences of characters appear •
- for example, change the background color to red if the keyword TROUBLE appears •
- play wave sounds or emit PC speaker beeps when some messages appear •
- specific sounds will be played depending on the severity of the alerts •
- memorize message window positions •
- · supervise if the communication seems to be dead

DS-JsmDisplay

datasheet

Overview

internal speaker.

Jsm Display is a software simulating one or more virtual call display panels on a computer screen. It receives messages from the serial port using a prioprietary protocol and pops up message windows on-screen. Different kind of bells will be played depending on the type of messages. Jsm Display can playback sound through external speakers or emit tones through the PC
